

# TOTAL CONTROL

Yacht Controller™ is manufactured for all boats/yachts using electronic engine controls.

Left and right bow and stern thrusters.

2 electronically controlled engines both forward and reverse.

Wireless Maneuvering  
Electronic Engine Control  
Anchoring Control Winch  
Control Bow Thruster Control  
Stern Thruster Control Safety  
Features Include:  
-Instant Neutral  
-Automatic shut off

## Yacht Controller™ is safe.

Should there be a malfunction in the Controller or a breakdown in communications between the Controller and receiver, then the Controller will emit an acoustic signal, and all functions return to neutral or safe mode. At all times the helm controls will override the Yacht Controller. The Controller's range is limited to the area around your boat and has a unique code to prevent interference from other equipment and similar transmitters on other boats.

## Yacht Controller™ is easy to install.

The receiver is compact and simple to install. The instruction manual details exactly how to connect to your existing wiring and the receiver wires are colour coded and in most cases will have matching connectors to fit your particular engine, thrusters and anchor.

### Technical Features:

Power of transmitter:  
2 batteries 1,5V type AAA (LR06)

Transmission Led and Notice Led of flat battery

Transmission Power: 5 mW 150 ft. Max (50 mt. Max)

Power receiver:  
12 VDC or 24 VDC +/- 5% max

ABS box with IP65

Dimensions of transmitter 3.8 x 2.2 x 1.5 in (100x55x35 mm)

Dimensions of receiver 6.8 x 3.2 x 2 in (170x80x55 mm)

Output to: 2 electronically controlled engines both forward and reverse plus left and right bow thruster.

Optional: Control for stern thruster or anchor winch

## Yacht Controller™ for any dockside manoeuvring.

Everyone associated with boats either as owners or spectators has experienced problems when manoeuvring in confined spaces especially in port or when mooring. Difficulties often occur in communications between the helm and crew resulting in damage to your own or other vessels and occasionally people.

Installing Yacht Controller eliminates these

problems. As Master of your vessel you are able to manage the forward, backward and sideways movements from any part of the boat, using the tumbler switches to control both forward and reverse on both engines and forward and aft thrusters if fitted. The Yacht Controller is very compact and can be fitted on your wrist or worn round the neck so that hands are free to throw ropes and assist in mooring.

The Yacht Controller is always on hand enabling you to correct any adverse movement caused by wind or tide.

Approach manoeuvre executed directly from stern with full view and complete control.

Handling lines while maintaining easy control of the boat.

Tying bow mooring lines to a buoy, anchor or dock is easy and controllable.

Fixing the lines from the stern becomes effortless.

## Yacht Controller™ makes picking up buoy's or lost overboard items easy.

No more dangerous, uncomfortable positions or wrong instructions from the crew trying to get a line to a floating buoy. With Yacht Controller, you can bring your boat directly alongside at the bow or stern and pick up the buoy either yourself or standing next to the crew in complete safety.

No longer in this dangerous and uncomfortable position.

Retrieve items simply and safely from the stern.

With Yacht Controller.

Without Yacht Controller.

Wireless remote controller.

# Yacht Controller.™ The wireless controller that allows you to rule your boat by yourself in the most difficult situations and in an easy and safe way.

## Yacht Controller™ makes docking easy.

Yacht Controller enables you safely to manoeuvre your boat closer to the dock while using the boat propulsion systems to position it accurately and easily, thereby allowing you, or your crew, to tie lines in an unhurried and relaxed way eliminating the usual commotion and loud communications which take place in tight spaces.

The use of Yacht Controller will undoubtedly pay you back with less damage and better relation with your friends, crew and neighbors while docking.

## Yacht Controller™ provides total freedom of movement.

Whenever you have to manoeuvre in restricted or crowded situations such as marinas, Yacht Controller allows you to be in the best position either forward or aft to oversee the operation and so ensure the safety of your vessel and others. You are also able to move freely around the boat whilst maintaining total control of the engines and thrusters.

## Anchoring with Yacht Controller™ is simple.

While anchoring you can have complete control of the boat from the bow and therefore accurately position the anchor away from any underwater obstructions or dangers. You are able to control the descent of your anchor and check if it has 'set' correctly. When weighing anchor, by controlling the position of the boat from the bow, you can manoeuvre the boat correctly to reduce load on the winch and ensure you have not fouled any other anchors or lines.

## Returning to berth single handed

## Leaving berth single handed
